\*\*\*p<.001, \*\*p<.01, \*p<.05

M=Meltzer (national UK) sample, J=Jewish sample, P=Parent, T=Teacher; Significant effects column: A=Age, G=Gender; NB High score on prosocial=LESS disturbed, high score on all others=more disturbed;

YG=younger girls(5-10), OG=older girls (11-15) YB-younger boys; OB=older boys

+Numbers of questionnaires received. In some cases numbers in particular analyses were fewer, due to incomplete data.

++Unlike the other (difficulties) scales, a low score on the prosocial measure suggests the presence of difficulties.
